Mission Statement

Leverage Statewide Common Infrastructure

The Infrastructure transition committee will offer input and feedback in the development of a timeline for leveraging common statewide infrastructure by utilizing the capabilities of ICN for network backbone, Internet connectivity, network management to the edge, traffic management and fault management. This positions the State's computing environment for long term value. It allows agencies to focus on core agency specific mission rather than on defining technical infrastructure. Additionally, this creates efficiencies in the use of technology and reduces Total Cost of Ownership.
